Rules of Play

Boston 5 is a five-card variation of Boston Stud Poker. It is dealt from a single deck of cards and can be played by six players.

Ante and Wagers

To start the game, each player must Ante and place a first wager. The Ante amount will be half of the first wager. Then each player and the dealer are dealt three cards face down. After viewing their cards, the players have the option to fold or place a second wager equal to their first wager. If they fold, they will forfeit their Ante and first wager. Those players who did not fold their hand will now receive two final cards dealt face down. The dealer also deals himself two final cards.

The player's five-card hand is then compared with the dealer's. Winning hands are paid even money on the wagers and the Ante is returned. If the hand loses, the dealer sweeps both the Ante and the wagers. Ties are pushes. Irrespective of the dealer hand, a Bonus is always paid based on the Ante if the player hand is two pair or better:

3-Card Hand Side Bet

In addition to the Ante and wager, the player has the option to make a side bet on his first three cards. The player is betting against one of the following pay tables:

Mathematical Analysis

After placing an Ante and the first wager the player must make a decision: fold or continue. He will weigh the expected return of his action and will stay in the game if the following criterion is met:

 $4 * W + B - 5 * L \ge -3$, where

W is the probability of winning at the final showdown, L is the probability of losing at the final showdown, B is the expected bonus paid on the Ante, and -3 is the player's loss if he folds.

Solving for W, we get
$$4W = 5L - B - 3$$
.
Assuming that B is small enough to be ignored[‡] and that $L = 1 - W^{\$}$, we get
 $4W = 5 - 5W - 3$,
 $9W = 2$,
 $W \approx 22.2\%$.

In other words, any player 3-card hand that can win at least 22% of the time at the showdown should not be folded. If the worst 3-card hand that can be dealt can win at least 22% of the time then the player should not fold any hand he is dealt. An exact probability analysis indicated that even the worst 3-card hand the player can get, 2-3-7 offsuit, will win 32% of the time:

Hand analysis	s of 2 ♣ -3 ♣ -7♥
Bonus	
3 of a Kind	$0.7653\% \times 5 = 3.8265\%$
Two Pair	$2.2959\% \times 3 = 6.8877\%$
Total Bonus	10.7143% (x +1)
Win	32.0972% (x +4)
Loss	67.8925% (x -5)
Tie	0.0103%
Player Expected Value	-2.0035 bets, as opposed to -3 bets if folded

Therefore, the optimal strategy is not to fold at all.

Since the player will play every hand to the end, the player and dealer will split the hands evenly, thereby resulting in a symmetrical probability distribution among them. A computer program was written to determine the probability distribution of the final hands:

[‡] Here we're only interested in the worst hands, which only yield a small bonus award from 3 of a kinds and two pairs.

[§] The probability of a 5-card tie is so small that it can be ignored.

Bonus Pay Table 1

The house advantage, for Pay Table 1, can be calculated as follows:

The computer analysis indicated that the player and dealer should beat each other 49.9956% of the time and tie 0.0087% of the time (see Appendix A and its Summary). This causes the player to lose (49.9956% * (5 - 4)) / 5 = 9.9991% per bet unit. The bonus paid on the Ante will reduce the loss to 9.9991% - 38.1320% / 5 = 9.9991% - 7.6264% = 2.3727% per bet unit.

The weighted average house advantage on the 3-card and 5-card bets combined can be computed as follows:

A = (B5 * A5 + B3 * A3) / (B5 + B3), where

B5 is the player's total wager on the 5-card bet,

A5 is the house advantage on the 5-card bet,

B3 is the player's total wager on the 3-card bet, and

A3 is the house advantage on the 3-card bet.

Example

The casino offers Pay Tables 3 and 6. Thus, A5 = 3.3235% and A3 = 2.3167%. A player places \$5 on the 3-card bet and \$2.5 on the Ante, \$5 on the 1st wager and \$5 on the second wager. Thus, B3 = \$5 and B5 = \$12.5.

Plugging the above numbers into the formula, we get A = (12.5 * 3.3235% + 5 * 2.3167%) / (12.5 + 5) A = 3.04% per total wager
